

Digital Radio

vitalTM

**Vital has been providing
and managing critical
communication networks
since 1994.**

We are the leader in the mobile
radio network market, providing
the only commercial nationwide
mobile radio infrastructure
across New Zealand.

National Leader in Vital Communications

Choose Digital Radio

Connectivity

Digital provides flexibility to make one-to-one calls or communicate instantly with an entire work-group at the touch of a button.

Worker Safety

Vital Digital network supports worker safety features including emergency calling, man-down, and lone worker. With GPS location services linked to these features, the location and nature of the emergency can be easily ascertained, and help dispatched quickly.

Integration

Vital Digital network is IP-based, making it easier to interconnect business enhancing data services and applications.

Business Continuity

When emergencies and disasters strike, radio networks are often more reliable and robust than cellular networks as they do not get overwhelmed with traffic from the public and generally have back-up power supply.
